End-to-End Usability Audit

Bugs

B1 - Studio pages (/studio/games, /studio/decks, /studio/cards) return a 404 instead of redirecting to sign-in when accessed while unauthenticated. (*Top nav links*)

B2 - Sign out does not redirect the user, the page stays unchanged until the next navigation, making it appear as though sign-out failed. (*Sign out button*)

B3 - The Playtest link in the top nav does not lead to a playtest, it redirects to the Decks page. (*Top nav*)

B4 - AI attempts to draw twice per turn due to a duplicate setTimeout in the turn useEffect. (*PlaytestClient.tsx*)

B5 - AI deck is empty from turn 1 when the player's card pool is small, the AI mirror deck is exhausted by the 5-card opening hand draw. (*PlaytestClient.tsx*)

B6 - Number inputs accept leading zeros (e.g. 000001) without sanitizing the displayed value. (*Card creation / edit forms*)

Confusing Flows

F1 - No onboarding path, a new user has no indication that the correct starting sequence is Games → Cards → Decks → Playtest. (*Homepage*)

F2 - The Playtest entry on the homepage leads to a dead-end page that only says "go to Decks", it isn't a useful destination. (*/playtest*)

F3 - The Portal page lists published games but none are clickable or actionable, there is no path to play or interact with a game from this screen. (*/portal*)

F4 - After creating a card, the user is redirected to the game's card list with no confirmation, it is unclear whether the save succeeded. (*Card creation*)

F5 - Magic link sign-in uses `window.prompt()` for email entry, a browser-native dialog with no styling, which feels untrustworthy and breaks the UI flow.
(*/auth/signin*)

F6 - Deck creation redirects back to the Decks page but saved decks show no card count or game details at a glance, making it hard to confirm what was just saved.
(*/studio/decks*)

Missing Functionality

M1 - No delete option for cards, decks, or games anywhere in the app. (*Studio pages*)

M2 - No deck editing, once a deck is created, cards cannot be added, removed, or swapped. (*/studio/decks*)

M3 - No win condition in the playtest, the game continues indefinitely with no result ever declared. (*Playtest*)

M4 - No resource/energy system in the playtest, cards are played freely regardless of their cost value. (*Playtest*)

M5 - No attack mechanic in the playtest UI, battlefield cards can only be discarded, not used to attack. (*Playtest*)

M6 - No health tracking for creatures on the battlefield during playtest. (*Playtest*)

M7 - Playtest does not enforce phase structure (Draw → Action → Combat → End) per the Alpha Ruleset. (*Playtest*)

Ruleset Non-Compliance (Alpha Fixed Ruleset v0.1)

R1 - Card types are Unit, Spell, Item, ruleset specifies only Creature and Object.
(*Card creation form*)

R2 - The stat "Defense" does not exist in the ruleset, Creatures should have Health (1-10), not Defense. (*Card creation form*)

R3 - Object cards should only have a Cost field, Attack and Health fields should not be shown for Objects. (*Card creation form*)

R4 - Deck validation uses min 1 / max 60, ruleset requires exactly 30 cards.
(*deckValidation.ts*)

R5 - No enforcement of the minimum 10 Creature cards per deck rule.
(*deckValidation.ts*)

R6 - Stat range validation is absent in the UI, Cost should be 0-10, Attack 1-5, Health 1-10 per the ruleset. (*Card creation / edit forms*)

Rough UI Areas

U1 - Playtest is presented as a set of text-list panels rather than a visual board, there are no card slots, no spatial layout, and no visual distinction between zones.
(*Playtest*)

U2 - App page title is "Create Next App" in the browser tab across all pages. (*Global - layout.tsx*)

U3 - All Studio nav links are hidden on mobile with no hamburger or alternative menu. (*Top nav*)

U4 - The Selected Cards panel in the deck builder shows card names as a plain comma-separated string with no count, no remove button, and no visual card representation. (*Deck builder*)

U5 - The action log in the playtest has no label indicating newest-first order, and the initial game-start message appears mid-log after a few actions. (*Playtest*)

U6 - No loading skeletons on the Decks or Cards pages, content appears abruptly with no transition. (*Studio pages*)

U7 - No 404 or error pages defined, Next.js defaults are shown on any unhandled route or server error. (*Global*)

U8 - The /supa-test route is publicly accessible in the production deployment.
(*/supa-test*)
